OWL'S SYSTEMS APPROACH

Consultation

Authoritative knowledge of residential and commercial structures.

Engineered Drawings

Experienced designers solving complex problems.

Services

A consistently high level of technical support is fundamental to OWL's customer satisfaction philosophy. Our highly skilled team of design specialists – building code qualified and insured - use sophisticated design and engineering software, including proprietary computer aided design (CAD) and estimating programs. Custom prepared job site packages, large inventory support and job site delivery add up to a superior product line, backed by over 30 years of experience in building material distribution.

Products

Laminated veneer lumber (LVL), APA PRI 400 (Performance Rated I-Joists), glued laminated beams, headers and columns, OSB rimboard, standard and custom fabricated metal connectors means one of the most comprehensive engineered wood product offerings available from one source.

APA – Quality Control

OWL's I-Joists, LVL, Glulam and Rimboard all meet the specifications determined by the APA, an accredited Certification and Testing Organization by the Standards Council of Canada. The APA assists the industry in creating structural wood products of exceptional strength, versatility, excellence and reliability. For more information, log onto www.apawood.org.

Custom Prepared Job Site Packages

OWL Distribution is equipped to do it all, from the materials list and precut packages to structural system designs from floor to roof.

Tracking and Delivery

On-site delivery as required.

OWL Guarantee of Satisfaction

Engineered Wood Products distributed by OWL, are manufactured to exacting standards and guaranteed to be free of defects for the expected life of your home. The OWL standard for quality assurance and reliable performance through rigorous testing procedures are fully backed by the APA trademark.

Environmental Benefits

Environmentally responsible Engineered Woods Products use less energy to manufacture than steel, concrete, aluminum or plastic. A home framed with EWP from OWL uses 50-60 per cent less wood fibre than one framed in solid sawn lumber. As well as conserving forest resources, our products help to reduce harmful CO² emissions and construction waste.

OWL Facilities

Strategically located in Woodstock, Ontario on a modern, 11-acre distribution facility, OWL's modes of transportation include a fleet of trucks and the close-at-hand 400 Highway and rail systems. Centralizing our inventory, administration and sales team in one location, enables us to precisely track and coordinate all incoming and outgoing orders, guaranteeing prompt delivery and customer fill rates. We back our superior product through state-of-the-art computerized inventory management.
